

IMTS TRAILED TRACK SYSTEM

VERSATILITY. STABILITY. FLOTATION.

Stryder Intelligent Multi-Terrain Track System (IMTS) is a fully suspended trailed track system designed to reignite your equipment's potential. Equipped with load-sharing axles and 4-way pivoting midroller bogies, it delivers an unparalleled ride quality. Access the field effortlessly, while preserving the soil and saving crucial time. Elevate your performance with IMTS.

WHY TRAILED TRACK SYSTEMS?

Choosing tracks isn't just practical; it's a strategic move. The weight of your implement is distributed over a much larger surface area, drastically reducing ground pressure.

The result?

No more ruts, and newfound access to every corner of your property, no matter the weather. Reduced ground pressure ensures less soil compaction and enhanced aeration, fostering the perfect conditions for harvest. With tracks, you're investing in your equipment's performance and nurturing the future of your land.

FOR THE FUTURE OF AGRICULTURE
